

SUBMISSION:

- Main Manuscript (PDF)
- Supplementary Material (PDF)
- GitHub Link

RECOMMENDATIONS

- Use the provided **template** for the main manuscript. Change text size to 11.
- A minimum of **4-5 pages** is recommended (for main text, without figures, without references, without tables). It is recommended that Figures and Tables are embedded in the text.
- It is necessary to add the Section: **Objectives** after the Introduction, before Methods.
- There is **no limit in Supplementary Material**, you can add as many Tables, Figures as you want.
- There is **no limit in the number of references**. It's good to have a high number of references. You should, at least, read the abstract of any introduced reference.
- **Paperpile** (chrome extension, one month free trial) is really easy to use, an excellent tool. **Mendeley** (free) can also be used. A list with all references should be provided at the end of the manuscript. It is mandatory to use Mendeley/paperpile/any software to generate the reference list
- Do not introduce the name of any script in the manuscript. You can use a Figure with the pipeline and explain it in the Methods Section. **GitHub** should be used and only a link to Github (in methods) should be referenced in the Manuscript.
- Add **legend** to all figures and Tables
- All **Figures** and **Tables** should be **referenced** in the main manuscript
- It is necessary to number the Manuscript pages (page number one is where the Manuscript starts, not where the Title+Abstract starts).
- Use grammarly to review the manuscript. Remember that you have a free subscription as ESCI student
